

The Client

Crane Worldwide, a large project forwarder, was working in partnership with one of the world's global car manufacturers.

The Challenges

Due to port issues in Los Angeles, CA a large quantity of car parts were stuck in containers on carriers, unable to be delivered to the factories; having an on going affect with the production line.

The Requirement

The requirement was for 6 x 40 DV to be supplied out of Tokyo for non-hazardous car parts, to be flown via a chartered aircraft to the USA with final destination El Paso.

The Solution

Our organization leased these units one-way ex depot Tokyo with redelivery to Dallas, Texas.
